Just as a linear force is a push or a pull, a torque can be

thought of as a twist to an object. Torque - Wikipedia

Photo electric effect
Effect of temperature on the photoelectric effect
The photoelectric effect is the emission of electrons from a metal surface when light of a certain frequency strikes it. The frequency of the light must be above a certain threshold frequency, which is characteristic of the metal. The energy of the emitted electrons increases linearly with the frequency of the incident light. The maximum kinetic energy of the emitted electrons is given by the equation $K_{max} = hf - \phi$, where h is Planck's constant, f is the frequency of the incident light, and ϕ is the work function of the metal.
